

The project:

Some social networking

- You have users (register, login, logout)
- You have posts to each user
 - Posts have
 - Title
 - Description
 - **Image id**
 - User id
-

Backend:

- Node.js - with typescript
- Microservices - do it the way you want and we will review this later(you can just create architecture and and set up a meeting with me)
- Each microservice has his own DB
- Handle JWT token
- Handle API:
 - Register - should create user & and create "welcome" post
 - Login
 - Logout
 - Create Post
 - GetPosts (by user id)
 - Delete user
 - nothing should be deleted from db
 - When user deleted all his posts deleted too
- Handle Errors.
- Handle validations.
- Use Express.
- Note: You should imagine that all this project will be wide in the future, so do things the right way.

DB:

- MongoDB
